How is a leaf built for photosynthesis?

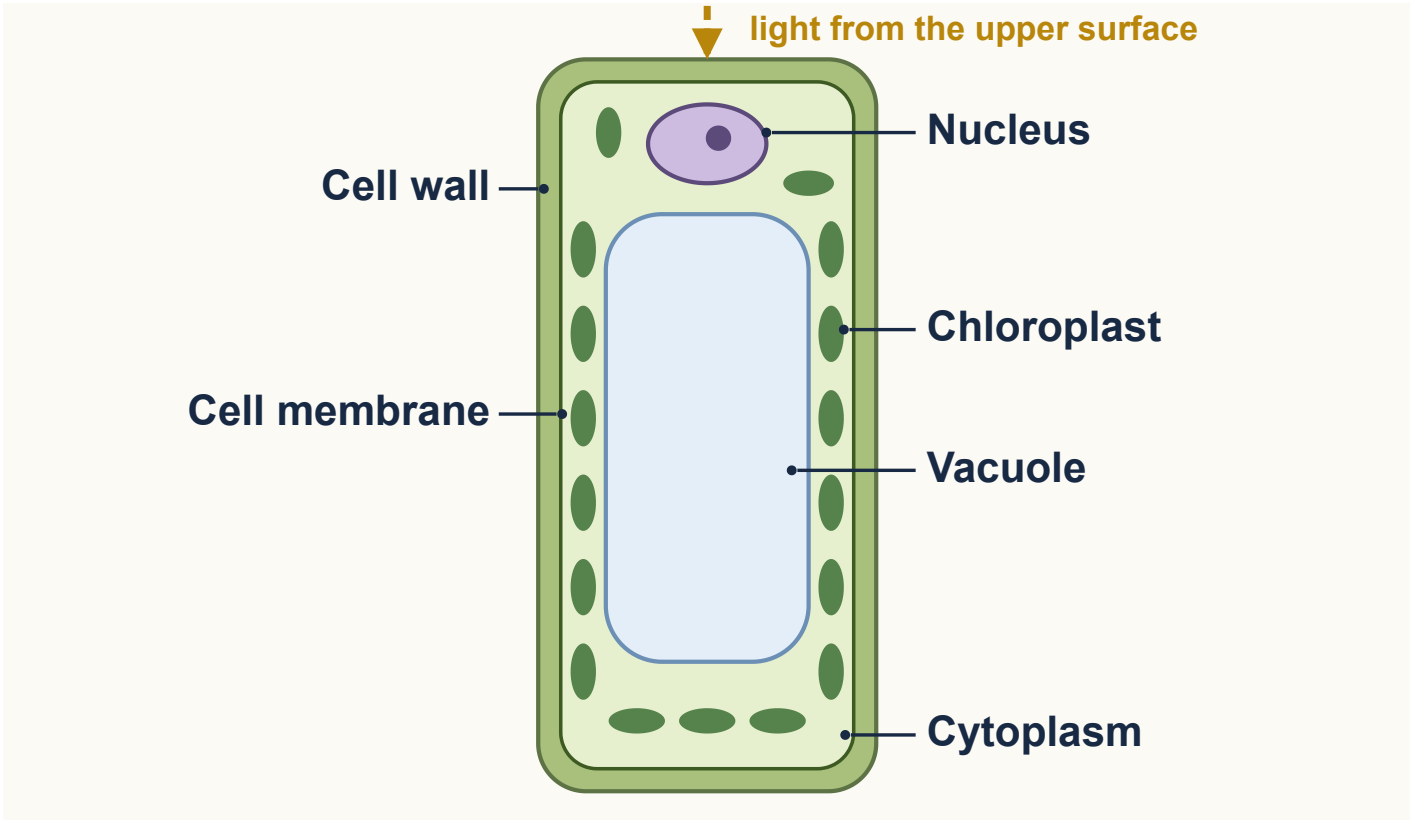

Name _____ Date _____

Name	Job: what it does	Link: which input or output it helps
1 Palisade cells	Tall cells packed with chloroplasts, just under the upper surface.	Absorb as much **light** as possible.
2 Stoma + guard cells	A pore. Guard cells open and _____ it.	Lets _____ diffuse in and _____ out.
3 Air spaces	Gaps between _____ cells.	_____ diffuses quickly to the _____ cells.
4 Xylem		
5 Phloem		

6 Waxy cuticle + upper epidermis		
7 Leaf is broad and thin		

A palisade cell

1. Why is a palisade cell tall and packed with chloroplasts? Use the word *light*.

2. Which **three** structures in this cell are also found in an animal cell? Which **three** are not?

3. Think deeper. A root hair cell has no chloroplasts. Explain why that is not a mistake.
